**EASY TO UNDERSTAND**

**DIFFICULT TO MASTER**

Active  
Support

# Short talk number one

Active Support – looking back

And has been applied in North Wales since 1990

Person-Centred Active Support was developed at the University of Kent 2004 - current

It was revitalised in South Wales in 1999

Active Support was developed and evaluated here in a town called Andover 1981-1986

---

Helping people change behaviour that challenges  
and meet the challenges of everyday life.

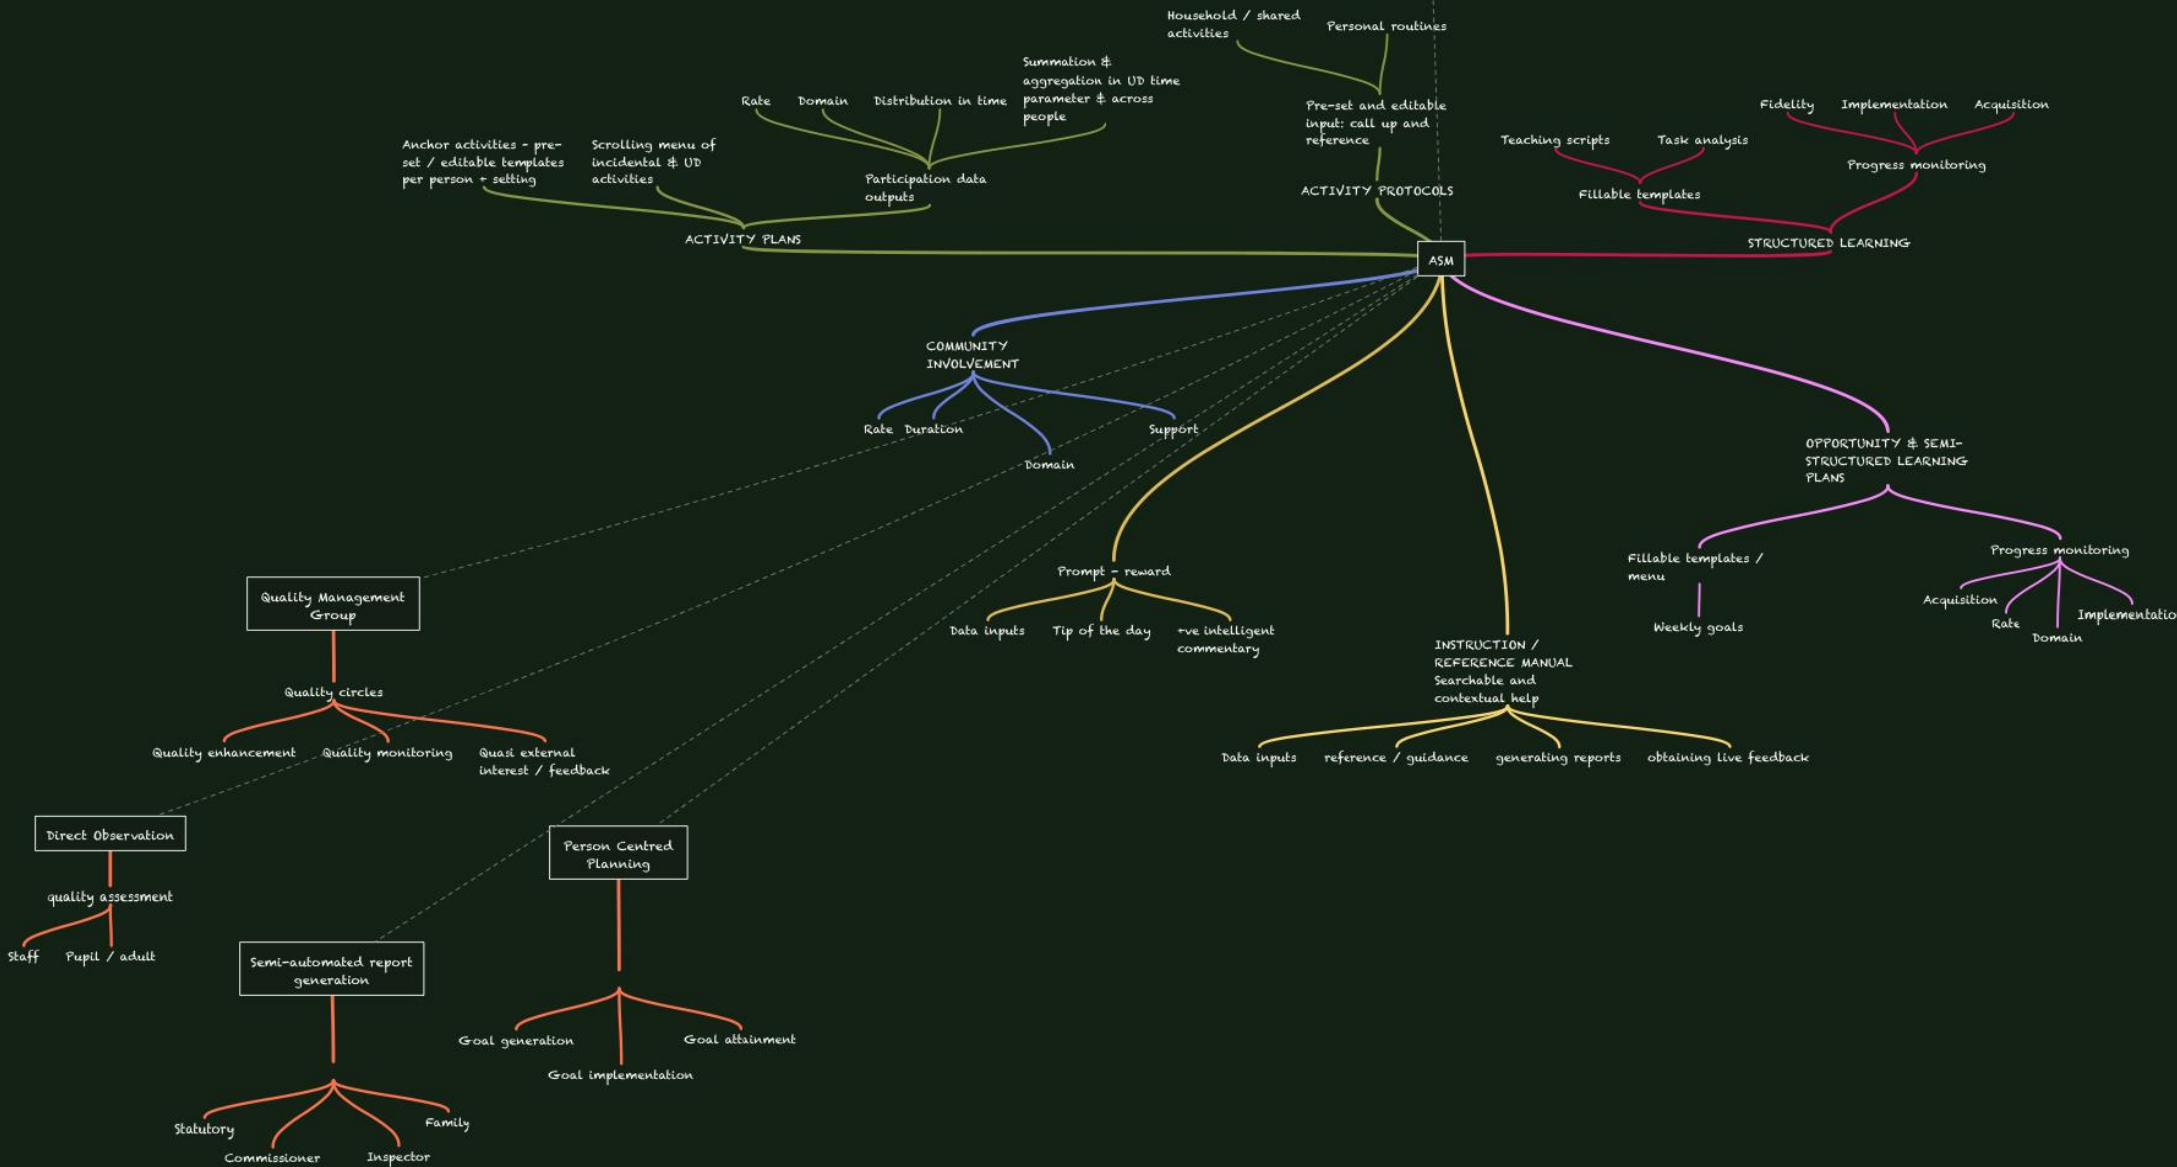

## Close to Home

*One of the most remarkable things is I never felt it was all programmed. I didn't realise until recently that it's carefully structured. It seems just a friendly, ordinary household - really marvellous.*

(Felce and Toogood, 1988. Pp 144)

INTENSITY  
RELEVANCE  
BALANCE

# An ordinary life

Doing something  
extraordinary - makes  
the ordinary possible

# Short talk two

## A bit of theory

ACTIVE  
SUPPORT:

THE CORE  
MESSAGE

What has  
been the  
core  
message?

# Engagement

Engagement is the key to:

- Quality of life,
- Behaviour change,
- Learning, development, and growth.

For you, me, and the people you work with.

Engagement

---

Engagement is doing something meaningful.

---

It is all about interacting and participating.

---

Without engagement there is no learning and there can be no development.

# Types of engagement

Activity engagement is about taking part in activity.

Social engagement is about spending time with others.

# Engagement

We are all engaged almost all the time.

Lack of engagement is a major issue in many adult social care environments, in special education settings, in communities, and in family homes.

# Engagement

---

Levels vary according to **behavioural ability** and **practical assistance**.

So what we do makes a **BIG** difference.

Teaching and assisting are types of behaviour.

Teaching and assisting

And so,

we can learn how to do  
it well.

## Staff training

Density and massing.

Behavioural models and feedback.

In-vivo = contextually salient

# Evaluating staff training

---

Effectiveness

---

Efficiency

---

Acceptability

---

Measurable change in staff behaviour

---

Observable change in support user behaviour

---

Generalise beyond the immediate training situation.

# Behaviour

Behaviour is what we do.

Behaviour occurs in a context.

Context (also called the environment) is everything inside and outside our skin that makes behaviour more or less likely.

# Context and contingency

Our behaviour (what we do) has an effect → it makes the environment responsive.

How the environment responds selects future behaviour → making more or less likely the behaviour will be repeated.

[This Photo](#) by Unknown Author is licensed under [CC BY-NC-ND](#)

But it  
works both  
ways

“Boy, have I got this guy conditioned! Every time I press the bar down, he drops in a piece of food!”

What does  
engagement  
look like?

[This Photo](#) by Unknown Author is licensed under [CC BY-SA](#)

# Short talk number three

Environments

# The physical environment

Is all of the things we are able to sense – the things we see, hear, taste, touch, and feel.

The physical environment influences behaviour.

IF we feel too warm, we may THEN open a window. Opening a window is behaviour. IF we gain relief from opening a window, we may THEN be more likely to repeat the behaviour when next we feel too warm.

# The social environment

---

Is the range of social contacts we have with others, and how that fits with what we want, need, and prefer.

Most of us value social contact, most of the time. All contact is not the same, however, or of equal value. The power to evoke behaviour is greatest when it is absent.

IF we have no one to spend time with, we may THEN seek contact with others.

- 

# The tangible environment

---

The tangible environment is everything that exists. Things we can hold, and things that we can eat and drink.

Most of us feel a basic need for food and drink, and to be occupied, and we feel it more strongly when it is absent.

IF we have nothing to do, feel hungry or thirsty, we may THEN search for something to do, eat, or drink.

# The task demand environment

---

The task demand environment is the pattern, level, and type, of activity demand that exists in our life as it relates to our ability to meet those demands and to our preferences.

Most of us want to avoid doing activities that are too difficult, that occur too often, that are too bunched up in time, or that we simply dislike.

IF we have too many difficult or low-preferences tasks, we may THEN find ways of avoiding those activities.

# The inner-world environment

---

Most of us have a sense of an inner-world, that only we can know, but that we can describe to others in words.

Our inner-world is another type of environment in that it effects what we do.

For example, IF we feel pain, THEN we might engage in behaviour to alleviate the pain, such as taking an analgesic.

# Verbal environment

---

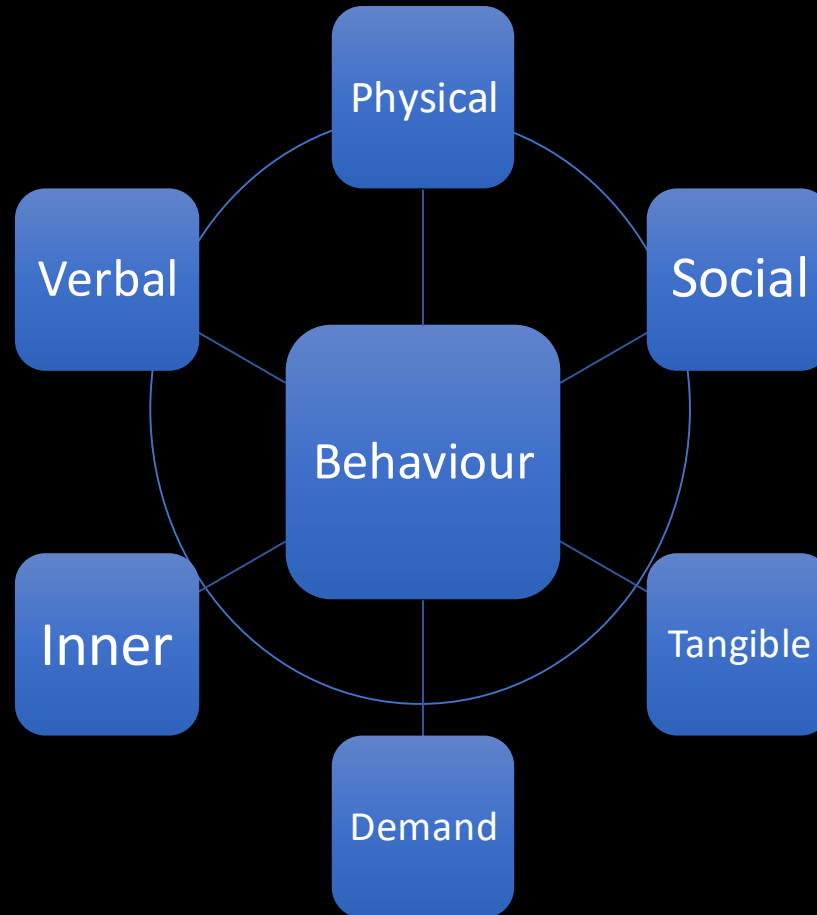

Uniquely, human beings have the ability to think, read, write, speak, and listen in words.

This means we can (a) observe and describe relationships between behaviour and environment, and (b) form rules about when to and when not to behave in certain ways.

The ability to speak and listen span the inner- and outer-world environments described above, in ways that are sometimes helpful and sometimes not.

# Constellation of Environments

# HELPFUL – SUPPORTIVE – NURTURING

Make the PHYSICAL environment as comfortable and attractive as possible.

Provide opportunities for SOCIAL CONTACT mainly in response to non-challenging behaviour.

Minimise restrictions on accessing TANGIBLES.

Provide SUPPORT and ASSISTANCE.

# HELPFUL – SUPPORTIVE – NURTURING

Observe and manage physical and emotional  
WELLBEING.

Have clear methods of COMMUNICATION.

Harmonise high EXPECTATIONS

Utilise ROUTINES and be CONSISTENT.

Choose one thing you can do to  
make the environment  
supportive and nurturing

Make it easy to  
remember

# Short talk four

# Active Support

---

- Simply constructed
- Easy to understand
- Difficult to MASTER

# Active Support

It takes an extra-ordinary effort to accomplish the ordinary ... and make it look easy

A graphic consisting of a white border enclosing a black square. Inside the square, the word "TRY" is written in a thin, white, sans-serif font, positioned above the word "HARD", which is written in a much thicker, white, sans-serif font.

TRY  
HARD

# Active support environments:

- Build on what people can already do.
- Plan how people use their time.
- Supply assistance in the moment as it is needed.
- Monitor progress and keep track.

# Active Support Procedures

Person-centred learning.

Context – home and community environments.

Transact effective teaching and support.

# Supportive environments manage

Expectation, engagement, and support intensity – how much?

Programme relevance - goodness of fit with individual need and curriculum demand.

Balance curriculum and timetable over time and content.

## Supportive environments:

Support and assistance replace demand and control.

Spending time with others replaces being ignored or overlooked.

Accessing nourishment and activity materials replaces impoverishment and restriction.

Having interesting things to do replaces boredom and passivity.

McGill & Toogood (1994)

# BAGS of support

- Belonging and connection
- Autonomy and control
- Gifts and talents
- Speaking, listening, and sense of self

# Paperless system

## ACTIVITY SUPPORT PLANS

- Anchor activities.
- Incidental activities.
- At home and out-and-about activities.
- Household Customs.
- Personal routine scripts.
- Realtime data display.
- Data management.

# Paperless system

- *Hints and tips.*
- *Encouragements.*
- *Structured learning scripts.*
- *Opportunity and learning plans.*
- *Person-centred life plans.*
- *Function-based behavioural support plans.*

# Short talk seven

Conclusion

# Summary

- Easy to understand difficult to master.
- Engagement is the key - ability, assistance, and environments.
- Helpful – supportive – nurturing Active Support environments.
- BAGS of support.
- Easy win.
